

FRONT BUMPER

BY **OMSA**[®]

MADE FROM
STAINLESS STEEL

Electrostatic paint on stainless steel material, 2 mm material thickness, 5 mm connection bracket thickness, non-destructive installation possibility... Unrivaled Steel Front Bumper

FRONT BUMPER

STEEL

The body of the stainless steel front bumper is made from 2 mm thick stainless steel.

The top coating is applied using electrostatic paint for enhanced protection and durability.

Since the stainless steel material is coated with electrostatic paint, it does not corrode when exposed to snow, ice, or rain, and is resistant to rust.

The electrostatic paint coating provides a protective barrier, preventing corrosion and rust in harsh weather conditions such as snow, ice, and rain.

The crane connection is manufactured from 5 mm DKP sheet and comes ready for installation.

Product Weight: 48 - 53 Kg

3 Years Warranty

"OMSA, the difference that you desire"

FEATURES

Produced using CNC technology, our Front Bumper offers perfect fit and minimizes the risk of assembly faults.

Electrostatic Paint

Stainless Steel

3 Years
Warranty

Non-destructive
Installation

Our product is not an add-on to your existing bumper—it replaces it entirely. To install the Dakar steel front bumper, the original bumper must be removed.

OMSA LINE

NON-DESTRUCTIVE INSTALLATION

Our products are packaged with a visual assembly guide, allowing for easy installation without professional assistance.
